SERIAL NO. 26

Datum Planes in the Caloosahatchee River-Lake Okeechobee  
Drainage Areas, Florida

1. The following information is presented in order to explain the reasons for, and clarify the nature and relationships of, the datum planes used by the U. S. Engineer Department as references for elevations in the Caloosahatchee River-Lake Okeechobee Drainage Areas, Florida.

2. In 1884 and 1885, the U. S. Coast and Geodetic Survey observed 96 high waters and 100 low waters in Punta Rasa, and established the relationship that mean low water was 0.86 foot below mean tide level. That datum, known since as "mean low water, Punta Rasa," became the standard datum for waterway elevations along that section of the west coast of Florida. In 1933, the U. S. Coast and Geodetic Survey established mean sea level elevations on the tidal bench marks at Punta Rasa, and determined that "mean low water, Punta Rasa," is 0.88 foot below mean sea level; thus, at Punta Rasa, mean sea level differs from mean tide level by only 0.02 foot.

3. In 1887, a line of levels was run from the Punta Rasa bench marks up the Caloosahatchee River by the U. S. Engineer Department, and a bench mark was established near Lake Hicpochee. The elevation assigned to that bench mark was referred to "mean low water, Punta Rasa." In 1901, a line of levels was run from the 1887 bench mark at Lake Hicpochee up the Kissimmee River. (See Annual Report, 1902, page 1245.) Other surveys in the Lake Okeechobee area were also based on that same bench, and when the Federal project for the Caloosahatchee River-Lake Okeechobee Drainage Areas was adopted, all then-existing elevations in the lake area were referred to what was supposed to be "mean low water, Punta Rasa," as derived directly or indirectly from the 1887 bench mark near Lake Hicpochee. That datum was accordingly adopted for the Federal project, and prescribed in Senate Document No. 115, 71st Congress, 2d Session, the project document.

4. During 1933 and 1934, and since, the U. S. Coast and Geodetic Survey ran a network of precise level lines covering peninsular Florida. Check lines run by the U. S. Coast and Geodetic Survey and by the U. S. Engineer Department from the U. S. Coast and Geodetic Survey lines to bench marks previously established have definitely proved that the level lines run up the Caloosahatchee River and Kissimmee valleys in 1887 and 1901 were inaccurate, that the original bench mark near Lake Hicpochee was in error, and that the elevations assigned to bench marks about the lake were not, in fact, referred as supposed to a datum plane 0.88 foot below mean sea level (mean low water, Punta Rasa) but to a plane about 1.44 feet below mean sea level. In order to minimize the work and confusion which would have been entailed by

SAJP 1130-2-15  
Volume 2  
APP D  
22 Nov 78

assigning to all bench marks, structures, lake stages, etc., now, elevations based on the true "mean low water, Punta Rasa datum," it was decided to adhere to the actual datum thereto used (1.44 feet below mean sea level) but to designate it as "Lake Okeechobee datum" instead of "mean low water, Punta Rasa" datum.

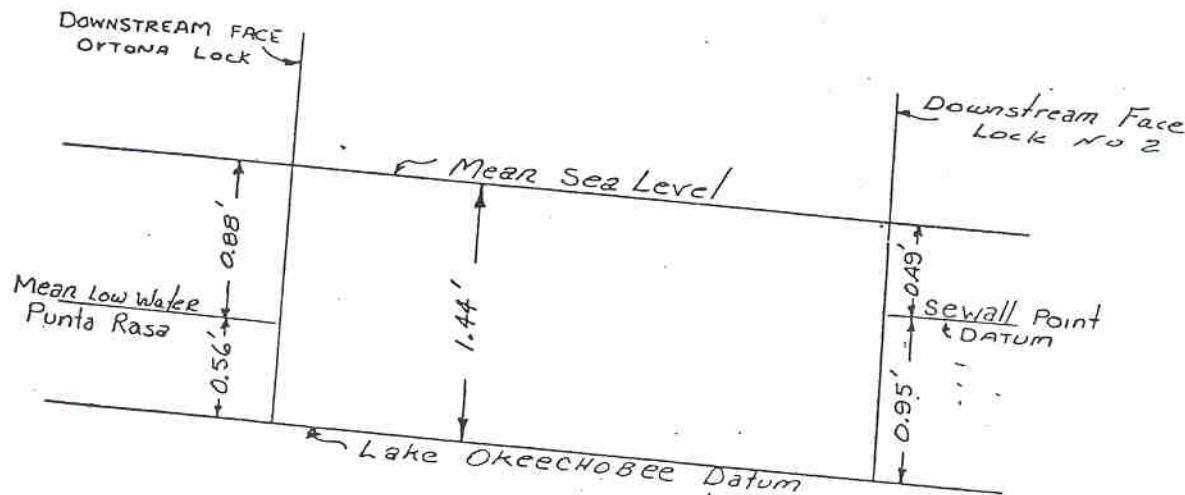

5. Nor did the datum plane used for Lake Okeechobee coincide with the datum plane used for the Intracoastal Waterway along the east coast, and an adjustment between them became necessary at some common point. The necessity for such adjustments led to the adoption of the following system of datum planes:

(a) The Caloosahatchee River from the Gulf of Mexico to the downstream face of the Ortona Lock is referred to "mean low water, Punta Rasa" (0.88 foot below mean sea level as established by the U. S. Coast and Geodetic Survey).

(b) All waterways between the downstream face of the Ortona Lock and the downstream face of Lock No. 2 (or the new lock when completed) in the St. Lucie Canal are referred to "Lake Okeechobee datum" (1.44 feet below mean sea level as established by the U. S. Coast and Geodetic Survey, and therefore 0.56 foot below "mean low water, Punta Rasa").

(c) The St. Lucie River and canal from the downstream face of Lock No. 2 (or the new lock when completed) to the Intracoastal Waterway are referred to "Sewall Point" (0.49 foot below mean sea level as established by the U. S. Coast and Geodetic Survey, and therefore 0.95 foot above "Lake Okeechobee datum").

These relationships are shown graphically below:

## MIAMI-DADE COUNTY--Continued

WELL NUMBER.--253937080304001. Local Number G 596. USGS Observation Well near Homestead, FL.

LOCATION.--Lat  $25^{\circ}38'16''$ , long  $80^{\circ}30'44''$ , in SW  $\frac{1}{4}$  SW  $\frac{1}{4}$  sec.14, T.55 S., R.38 E., Hydrologic Unit 03090202, on SW 197th Ave., 70 ft north of Howard Drive, 2 mi west of SR-997 (Krome Avenue), and 15.5 mi north of Homestead.

AQUIFER.--Biscayne limestone aquifer of the Pleistocene Age, Geologic Unit 112 BSCNN.

WELL CHARACTERISTICS.--Drilled, observation, water-table well, diameter 6 in., depth 16 ft, cased to 16 ft.

INSTRUMENTATION.--Satellite data collection platform.

DATUM.--Land-surface datum is 7.28 ft above National Geodetic Vertical Datum of 1929. Measuring point: Top of flange, 3.48 ft above land-surface datum. Prior to October 1, 1978, land-surface datum was considered to be 7.70 ft NGVD. See REMARKS.

Measuring point was considered to be 10.59 from October 1, 1978 to November 21, 1986. New well was drilled on November 21, 1986.

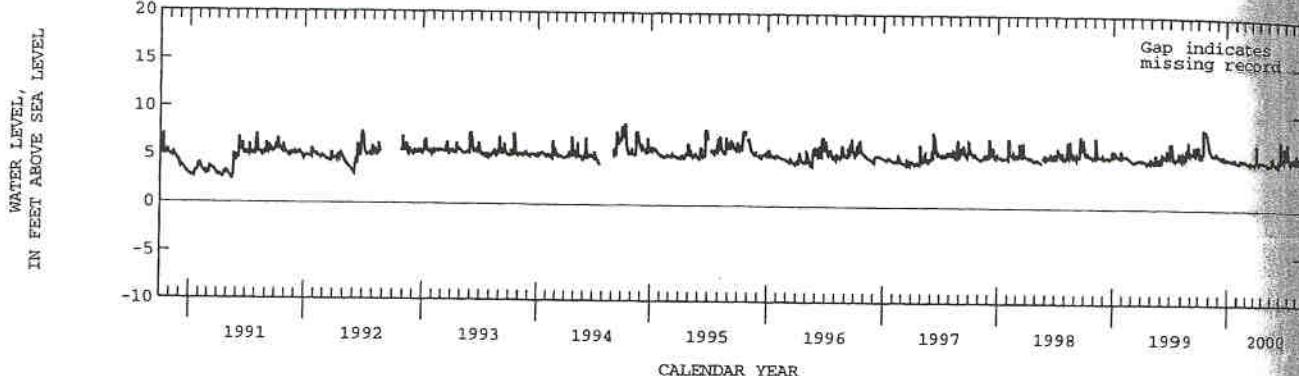

REMARKS.--The figures of water levels as elevation, in feet NGVD, prior to October 1978 are in error. Corrected records are in files of the Geological Survey. See DATUM. Records of water levels prior to January 1957 are available in files of the Geological Survey.

PERIOD OF RECORD.--January 1949 to current year.

EXTREMES FOR PERIOD OF RECORD.--Highest daily maximum water level, 8.37 ft NGVD, Oct. 12, 1994; lowest, 0.56 ft NGVD, May 14, 1971.

## PEACE, WITHLACOCHEE, HILLSBOROUGH RIVER AND WESTERN COASTAL AREA

## WITHLACOCHEE RIVER BASIN

02313000 WITHLACOCHEE RIVER NEAR HOLDER, FL

LOCATION.--Lat  $28^{\circ}59'19''$ , long  $82^{\circ}20'59''$ , in NW $\frac{1}{4}$  sec.30, T.17 S., R.20 E., Marion County, Hydrologic Unit 03100208, near right bank on downstream side of bridge on State Highway 200, 4.5 mi (7.2 km) northeast of Holder, and 38 mi (61 km) upstream from mouth.

DRAINAGE AREA.--1,825 mi $^2$  (4,730 km $^2$ ), approximately.

PERIOD OF RECORD.--August 1928 to February 1929, August 1931 to current year.

REVISED RECORDS.--WDR-FL-72-3: Drainage area.

GAGE.--Water-stage recorder. Datum of gage is 27.52 ft (8.388 m) National Geodetic Vertical Datum of 1929 (levels by Corps of Engineers). Aug. 14, 1928, to Feb. 15, 1929, nonrecording gage at present site at datum 2.00 ft (0.610 m) higher. Aug. 29, 1931, to May 19, 1961, water-stage recorder at site 100 ft (30 m) downstream at present datum.

REMARKS.--Records good.

AVERAGE DISCHARGE.--51 years (water years 1932-82), 1,080 ft $^3$ /s (30.59 m $^3$ /s), 8.04 in/yr (204 mm/yr), 782,500 acre-ft/yr (965 hm $^3$ /yr).

EXTREMES FOR PERIOD OF RECORD.--Maximum discharge, 8,660 ft $^3$ /s (245 m $^3$ /s) Apr. 5, 1960, gage height, 13.28 ft (4.048 m); minimum, 112 ft $^3$ /s (3.17 m $^3$ /s) June 18, 1956; minimum gage height, -0.41 ft (-0.125 m) June 19, 1945.

EXTREMES FOR CURRENT YEAR.--Maximum discharge, 3,390 ft $^3$ /s (96.0 m $^3$ /s) Sept. 28, gage height, 8.48 ft (2.585 m), occurred on peak preceding higher peak of Oct. 7, 1982; maximum independent peak discharge, 2,640 ft $^3$ /s (74.8 m $^3$ /s) June 27, gage height, 7.28 ft (2.219 m); minimum discharge, 173 ft $^3$  (4.90 m $^3$ /s) Oct. 20-22; minimum gage height, 0.77 ft (0.235 m) Oct. 20, 21.

DISCHARGE, IN CUBIC FEET PER SECOND, WATER YEAR OCTOBER 1981 TO SEPTEMBER 1982

## LAKE OKEECHOBEE

02276400 LAKE OKEECHOBEE, FL

LOCATION.--Center of lake, lat 26°57', long 80°50', in southern Florida, Hydrologic Unit 03090201.

SURFACE AREA.--436,000 acres (681 mi<sup>2</sup>) at elevation 14 ft above National Geodetic Vertical Datum, from data provided by U.S. Army Corps of Engineers.

DRAINAGE AREA.--About 5,650 mi<sup>2</sup>.

PERIOD OF RECORD.--October 1931 to current year. Records of elevations prior to October 1960 are available as follows: from 1912 to 1914 in reports or files of U.S. Army Corps of Engineers, 1915 to September 1931 in reports or files of Everglades Drainage District, and October 1931 to 1960 in files of the Orlando Subdistrict Office.

REVISED RECORDS.--WRD PL 1969: Surface area. WDR PL-77-1: capacity table.

GAGE.--Three water-stage recorders at Hurricane Gate No. 2, Hurricane Gate No. 6 and Port Mayaca. Datum of gages is National Geodetic Vertical Datum of 1929 (levels by U.S. Army Corps of Engineers). Prior to Oct. 1, 1941, nonrecording gage at St. Lucie Canal. Oct. 1, 1941, to Dec. 31, 1950, seven nonrecording gages at various locations on rim of lake. Prior to Oct. 1, 1933, at datum 1.01 ft lower. Oct. 1, 1933, to Sept. 30, 1946, at datum 1.44 ft lower.

REMARKS.--Lake is diked to form a reservoir and is regulated by control structure gates at several outlets. It is used for navigation, municipal water supply, irrigation, and flood control. Total usable capacity is 2,860,000 acre-ft between elevations 10.5 and 17.5 ft.

COOPERATION.--Records of elevations and capacity table furnished by U.S. Army Corps of Engineers.

EXTREMES FOR PERIOD OF RECORD.--Maximum elevation observed, 18.77 ft, Nov. 2, 1947; minimum daily, 9.79 ft, July 30, 31, Aug. 1, 1981.

EXTREMES FOR CURRENT YEAR.--Maximum daily elevation, 16.25 ft, Oct. 1, occurred on recession following crest of Sept. 30, 1984; minimum daily, 11.82 ft, June 12, 21.

Capacity table, water year 1983-85 (elevation, in feet, and capacity, in acre-feet)

10.0	2,040,000	15.0	3,950,000
11.0	2,370,000	16.0	4,380,000
